## FELLING NOTICE FOR 11 TREES SOUTHWEST BOROUGH, MONTREAL

### **CONTEXT**

---

Copropriétés MYST inc. is in the process of building a commercial and residential development at 2365, rue St-Patrick (lot 1 380 725).

### **METHODOLOGY AND TREE ASSESSMENT**

---

A forest engineer has completed a comprehensive assessment of the trees located close to the project. The trees considered in this study are located on Parks Canada's property, bordering on the lot to be developed by Copropriétés MYST. Thus, each of the eleven trees has been subject to a detailed study. The study results mention the fact that nearby excavation works will significantly weaken the root system of these trees. Given that the type of the trees considered is common, given that it is impossible to move these trees (mature trees), given that the survival of these trees is seriously compromised, it has been recommended that these trees be removed.

### **COMPENSATION**

---

The eleven trees to be felled on Parks Canada's property will be subject to a monetary compensation. These funds shall be entirely reinvested in landscaping the linear park along the canal.

### **TIMETABLE**

---

The work will be carried out during the week of March 4th, 2013
